RESEARCH INTERESTS

Systems security, return-oriented programming, exploit development, malware detection
Program synthesis, static and dynamic analysis, testing, compilers, language design

EDUCATION

University of California, Berkeley 2014
Ph.D.
Advisors: Rastislav Bodik and Koushik Sen

Stanford University 2008
B.S. (honors, distinction)

COMPUTER SKILLS

C, C++, Java, Scala, OCaml, C#, Python, JavaScript, ARM, L^AT_EX, HTML
Linux, Android, return-oriented programming, gdb

EXPERIENCE

Senior Engineer, Qualcomm Research Silicon Valley Fall 2014 - Present

- I am researching behavioral mobile security solutions to protect against malware and exploits. I have spent much of my time developing attacks on Android, including building real exploits that bypass SELinux and target Chrome and the Stagefright and Dirtycow bugs. I have handwritten ARM assembly and built a simple shellcode and ROP compiler to ease payload development. I developed and gave our lab a tutorial on memory error attacks and defenses, including building a sequence of ROP attacks from simple to complex.
- I worked on developing compilation techniques for programming special purpose accelerator architectures. Our compiler was based on LLVM, and I worked on the backend, including scheduling, software pipelining, optimizing individual instructions, co-designing new instructions, and numerous architecture-specific passes. I also worked on providing tools to understand and optimize the compiler output as well as improving our test infrastructure and tracking upstream development.

Graduate Student Researcher, University of California, Berkeley Fall 2008 - Summer 2014

I was a member of the Parallel Computing Laboratory (Par Lab) where I worked on program synthesis techniques to aid general-purpose programming. I built an Eclipse plugin that dynamically generated code snippets (along with a JavaScript port) and a graphical programming by demonstration tool.

Teaching Assistant, University of California, Berkeley Spring 2014

Was a TA for CS 61B: Data Structures.

Intern, Microsoft Research Silicon Valley Summer 2011

Worked on an architecture for modular cooperating compilers.

Intern, Microsoft Research Silicon Valley Summer 2010

Worked on a new architecture for evaluating LINQ queries that encompasses DryadLINQ.

Teaching Assistant, University of California, Berkeley Fall 2009

Was a TA for CS 164: Programming Languages and Compilers.

Intern, IBM T.J. Watson Research Center Summer 2009
Worked on the constraint-based type system for the X10 language.

Platform intern, Mozilla Summer 2008
Worked on a native code compiler for regular expressions.

Section Leader for CS 106, Stanford University Fall 2005 - Summer 2008
Taught a section covering introductory programming topics, graded homework and exams, staffed a help desk.

Researcher, Stanford University Summer 2006 - Spring 2008

- Built a verifying compiler for Zohar Manna and Aaron Bradley.
- Worked on two static analysis tools for Zohar Manna.
- Investigated the properties of online ad auctions and bidder strategies with Tim Roughgarden.
- Developed methods to enable the use of remote computers to speed up data processing by a robot for Andrew Ng.
- Developed techniques for visualizing personal information spaces for Pat Hanrahan.

Teaching Assistant, Stanford University Winter 2008
Was a TA for CS 156: Calculus of Computation.

Resident Computer Consultant, Stanford University Fall 2006 - Spring 2008
Assisted undergraduates with personal computer problems and administered a dorm network.
